Generation from all low-carbon power sources - renewables plus nuclear - surpassed 40% of global electricity in 2024 for the first time since the 1940s. Renewable power sources added a ...

Data on renewable power capacity represents the maximum net generating capacity of power plants and other installations that use renewable energy sources to produce electricity.

Find up-to-date statistics and facts on the global solar photovoltaic industry.

The present review study, through a detailed and systematic literature survey, summarizes the world solar energy status along with the published solar energy potential assessment articles for ...

For the first time, renewable energy has overtaken coal as the primary source of electricity around the world, a new report says, indicating a shift in the global reliance on...

Power generation from solar PV increased by a record 320 TWh in 2023, up by 25% on 2022. Solar PV accounted for 5.4% of total global electricity generation, and it remains the third largest renewable ...

The world's wind and solar farms have generated more electricity than coal plants for the first time this year, marking a turning point for the global power system, according to research.

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this ...

China has the highest cumulative solar energy capacity in the world. The IEA measures China's current capacity at 308.5 GW. The US is next with 123 GW of solar capacity. Japan has ...

1kW solar energy annual power generation ranks first in the world for the first time

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.
