-----  
Which rack is best for a high-density data center?

Enclosed racks are ideal for high-density data centers and server rooms, as they are designed to accommodate heavier and hotter equipment, as well as higher wattages per rack. Designed for compact spaces, wall mount racks attach directly to the wall to hold servers, switches, and patch panels securely.

What is a SmartTrack®; modular data center?

SmartRack®; Modular Data Centers are composed of IT rack, cooling and service enclosures that together form a performance optimized data center, or POD. This innovative design enables easy configuration and maintenance. It also lowers costs by reducing the overall cycle time to deploy a data center from months or weeks to just days.

What is a data center cage?

A cage, on the other hand, is a secured, enclosed area within a data center that contains one or more racks and offers an extra layer of security and isolation. While racks are used to organize and hold hardware, cages are used to separate and secure the racks, cabinets, and equipment of different customers or projects.

What is a data center rack?

Data center racks are metal frames used for organizing IT equipment such as servers and switches. Cabinets are enclosed racks that offer added security and environmental control. Cages are secure areas within a data center that house multiple racks or cabinets, providing an extra layer of security.
