What is the energy storage project database?

This is essentially a global industry platform for dissemination of project and performance metrics on the growing fleet of energy storage installations. Over the last four years, the database has been utilized to help shape the development of new projects, improve existing systems and to help develop policy and regulatory framework.

Why is energy storage data structure redesigned?

This redesign of the data structure also enables the path for getting the input data from reliable sources through APIs. A subpage on energy storage policies has been created to fill the gap on related policy information. Currently, policy analyses are provided for the United States.

What is a subpage on energy storage policies?

A subpage on energy storage policies has been created to fill the gap on related policy information. Currently, policy analyses are provided for the United States. The website has also been redesigned to provide better user experience.

What is the gesdb archive?

The data included in the archive has been fully validated. The GESDB represents a dynamic catalogue with a continuously updated dataset. This is essentially a global industry platform for dissemination of project and performance metrics on the growing fleet of energy storage installations.
