Since 2010, the National Solar Jobs Census has been the definitive measure of solar energy industry employment in the United States, charting the growth of the solar workforce ...

Making photovoltaic panels requires the work of many skilled workers, including semiconductor processors, computer-controlled machine tool operators, glaziers, and coating and painting workers.

The industry offers abundant career paths but faces persistent challenges in recruiting and retaining talent. Browse the Solar Jobs Census for perspectives on hiring difficulty, education and experience ...

The industry needs approximately 355,000 workers by 2026 to support this, up from 279,447 today (Dec 2023 data). Current hiring trends suggest we'll reach only 302,000 workers by ...

About 65 factories are making batteries, while a smaller number produce equipment for onshore and offshore wind. A broader population of over 800 facilities plays a supporting role in the ...

Ongoing efforts to expand the solar workforce participation, including local staffing dynamics, challenges, and relevant strategies. The first section discusses metrics related to solar workforce and deployment.

When those who spend less than half of their time on solar are included, the total rises to 364,544 workers. When including energy storage workers, there were 454,136 workers who spent at ...

Current data indicates that solar energy accounts for more than 60% of all jobs within the U.S. renewable energy generation sector. Efficiency gains and the expansion of utility-scale storage have ...

By December 2022, there were 263,882 solar jobs spread across all 50 states, Puerto Rico and Washington, D.C. The year 2022 marked a transitional phase for the U.S. solar industry, ...
