He is currently a Full Professor with the School of Electrical Engineering, Xi'an Jiaotong University. His research interests include renewable energy generation, microgrid control, and medium voltage ...

MM Ugeda, AJ Bradley, SF Shi, FH Da Jornada, Y Zhang, DY Qiu, ... C Jin, EC Regan, A Yan, M Iqbal Bakti Utama, D Wang, S Zhao, Y Qin, ... EC Regan, D Wang, C Jin, MI Bakti Utama, B Gao, X Wei, S...

Powertrain electrification is an effective solution to reducing emission of mobile machines. In this paper, an electric-hydraulic hybrid drive for wheel loader propulsion system is studied, where...

We have built a sound marketing and project support network and set up as many as 21 branches, providing strong support to the full life cycle of the projects. We have excellent project management ...

Explore the principles of dynamics and control in power generation, focusing on system stability, efficiency, and advanced control strategies for optimal performance.

This paper establishes a numerical model of wind power generation system. The low voltage ride-through characteristics of direct-driven wind turbines in case of grid failure are studied.

A wind power plant will use a step-up transformer to increase the voltage (thus reducing the required current), which decreases the power losses that happen when transmitting large ...

By harnessing the adaptability and learning capabilities, our research aims to improve wind turbine control, contributing to more efficient and sustainable wind power generation.

Recently developed next-generation sequencing technique enables us to reveal both the members of this huge community as well as its functions and impact on our human health.

How to control the power generation of Fengwang

By using Kisen Energy's Digital Cloud + Optical Storage and Charging Integration Solution, the above problems can be effectively solved, operational efficiency can be improved, ...
