While the idea of using fire to charge solar panels might seem plausible, there's a fundamental issue - the type of light emitted by fire is not suitable for the photovoltaic process.

The use of photovoltaic (PV) systems to generate electricity has increased significantly in recent years. However, this has also been followed by increasing fire risks in PV systems.

She's an OK [= fair] player. He's okay [=he is not bad] at math, but he really likes history. The movie was just OK.

5.4.3 The spread of a fire may be accelerated by a chimney effect beneath PV panels, especially on pitched roofs, with heat being radiated back onto the roof from the underside of the panels.
