In this paper, an optimal energy management strategy (EMS) for a light rail vehicle with an onboard energy storage system (ESS) combining batteries (BT) and supercapacitors (SC) is presented.

This paper explores the hourly energy balance of an urban light rail system (tram network) and demonstrates the impact of the use of EV's as the only energy storage ...

Does a light rail transit train have flywheel energy storage? The introduction of flywheel energy storage systems in a light rail transit train is analyzed. Mathematical models of the train, driving cycle and ...

What design and analysis tools are needed to analyze system requirements, optimize design and size vehicle OESS? How are standards (or lack thereof) impacting development? What new standards is ...

Abstract ery-based energy storage system, the light rail vehicle will perform much better than before. Light rail vehicle energy storage system links lithium battery and DC-link together, and energy flow ...

A simulation analysis of a special-purpose rail vehicle traveling across a non-electrified section of a railway line was conducted to assess the energy consumption rate and the necessary energy ...

In this paper, electrified transit system energy flows are analyzed for the implementation of energy storage system on board on Addis Ababa light rail transit.

A research review is carried out to determine the operating parameters of each technology, which are subsequently analysed and compared against the desired characteristics ...

A single-objective optimization energy management strategy (EMS) for an onboard hybrid energy storage system (HESS) for light rail (LR) vehicles is proposed. The HESS uses batteries and ...
