-----

Load shifting is a dangerous phenomenon in water, air, and ground transportation where cargo shifts in a cargo vehicle. This causes the vehicle to tilt, which causes even more movement of the cargo, and further tilting, thereby creating a positive feedback loop. If not corrected, this will lead to severe tipping or even capsizing. Such a dangerous occurrence is prevented by active load management, avoiding high sea conditions for ships, and proper container/bulkhead design.

Are you looking to move your goods faster all while saving time and avoiding large port fees? Transloading Shifted Loads might just be for you! Learn more and reach out now!

Load shifting is a dangerous phenomenon in water, air, and ground transportation where cargo shifts in a cargo vehicle. This causes the vehicle to tilt, which causes even more movement of the cargo, and ...

Background Each of the following topics provide a context for the importance of developing a load shift capable QAHV system that communicates through a CTA-2045 interface.

Sudden braking or turning can cause the cargo to shift, resulting in an accident at any time. Determining liability in such a truck accident can be a complex legal process, so seek legal guidance.

Who Is Liable for a Truck Accident Due to a Shifted Load? Improperly secured cargo and loads that are too heavy often result in shifting in transit, a hazardous condition that threatens everyone on the road.
