On February 1, 2023, a distributed photovoltaic power station in Muyang County, Suqian, Jiangsu Province, was hit by strong winds, and the scene was miserable, and the photovoltaic ...

Typhoon Doksuri unleashed its fury on southeastern China's Fujian province over the weekend, causing significant damage to the region's energy infrastructure.

At the 1,700-acre Xinye photovoltaic plant in Yangdong District, which began operation in 2015 with expected annual output of 57 GWh, staff estimated that more than half of the modules were...

Many photovoltaic solar power plants were significantly impacted by the disaster, resulting in extensive damage to photovoltaic modules and ancillary equipment.

Severe storms, hail, and hurricane-force winds are on the rise in many regions--and with them, damage to photovoltaic systems. Extreme weather conditions are particularly common during the summer ...

In the aftermath of Hurricane Milton in October 2024, footage of solar projects ravaged by tornadoes spread across social media, raising questions about PV's resilience to extreme weather....

Amid the widespread damage, some news stories have honed in on Darragh's impact on a solar farm in Anglesey, where a number of panels were blown off their mountings.

Spanning 190 acres, this two-year-old energy farm, designed to power up to 9,500 households, sustained severe damage. Hundreds of solar panels were blown off their mountings, many torn to ...

This study examines the significant challenges presented by the rising frequency and severity of climate change-induced extreme weather events--such as hurricanes, floods, heatwaves, ...

Longgang photovoltaic panels were blown away

n sand on solar PV panels cannot be overlooked. In this study, numerical simulations were employed to investigate the dynamics of the wind-blown sand field, sand-particle concentration, and the impact of ...
