---

The capacity configuration of the energy storage system plays a crucial role in enhancing the reliability of the power supply, power quality, and renewable energy utilization in microgrids.

To mitigate the uncertainty and high volatility of distributed wind energy generation, this paper proposes a hybrid energy storage allocation strategy by means of the Empirical Mode...

This paper studies the long-term energy management of a microgrid coordinating hybrid hydrogen-battery energy storage. We develop an approximate semi-empirical hydrogen storage ...

The aim of this study was to develop an energy management system for a hybrid renewable micro-grid system to optimize the deployment of renewable energy resources and ...

In our study, we are focusing on a hybrid AC/DC MG connected to a main AC grid, and using WTs based on a doubly fed induction generator (DFIG), PV panels, AC and DC loads as well ...

The issues posed by microgrid operators (MGOs) in managing energy from multiple sources, device as a storage, and response demand programs are addressed in this research study, ...

In this paper, we focus on a typical application: hybrid hydrogen-battery energy storage (H-BES). Given the differences in storage properties and unanticipated seasonal uncertainties, designing an effective ...

The deployment of HESS in microgrids has gained particular attention due to the increasing penetration of distributed energy resources and the growing demand for resilient, autonomous power systems.

The paper presents the model of a hybrid energy storage system using a lead-acid battery and supercapacitors for a rural microgrid that can resolve the issues of energy as well as the...

This paper proposes a microgrid model with an electric-hydrogen hybrid energy storage system (EH-HESS), aimed at achieving energy management for the microgrid and addressing its seasonal ...
