-----

Reducing emissions by at least 50% by 2030, aiming towards 55% lower emissions relative to 1990 levels. This updated NDC improves upon Norway's previous target of emissions ...

Historically, Norway has one of the highest per capita GHG emissions, recording 12.8 tonnes of carbon dioxide (CO<sub>2</sub>) equivalent per person in 2023, nearly twice the global average. ...

Norway does not have a net zero target but has committed to reduce emissions by 90-95% below 1990 levels by 2050. This target is included in Norway's long-term strategy submitted to the UNFCCC in ...

The government of Norway announced a new climate target, aiming to reduce absolute economy-wide emissions by at least 70% to 75%, on a 2019 basis, by 2035. The new ...

Norway is among them and stands out by having a net-zero GHG goal already for 2030. Thus, Norway is often referred to as a frontrunner in the net-zero debate. The net-zero ambition of ...

The government's proposed climate target is to reduce Norway's greenhouse gas emissions by at least 70 to 75 percent by 2035, compared to 1990 levels. This builds on Norway's ...

Norway plans to halve CO<sub>2</sub> emissions by 2030 on the way to becoming a zero-emission country by 2050. Today, Norway's prime minister Erna Solberg unveiled a plan to achieve that. The ...

Nonetheless, several countries have net-zero ambitions for the next decades, usually formulated in terms of greenhouse gas (GHG) emissions. Norway is among them and stands out by having a net ...

Explore carbon removal policy in Norway. Track strategies, funding, and how CDR is emerging in national climate policy frameworks.

In a major step toward advancing its ESG and carbon neutral strategy commitments, Norway has announced a
