Aspects of energy justice are emerging in Norwegian wind power policies. This paper employs an assemblage theoretical approach to analyse how Norwegian land-based wind power ...

The principal responsibility of the Ministry of Energy is to facilitate a coordinated and comprehensive energy policy. An overall goal is to ensure high value creation through efficient, safe, ...

There are still capacity constraints across significant parts of Norway's power grid. As a result, regulators have introduced measures to prioritise mature projects in areas with limited grid ...

Wind power is the only solution to Norway's future energy needs. Norway will fall into an electricity deficit due to delays in building out wind power, according to DNV's Energy Transition ...

The expected cost of building floating wind farms has soared as inflation hit turbine makers and other suppliers, leading developers to seek significant government support.

This article reviews the government policy and regulatory framework for renewable energy in Norway, with particular regard to recent developments.

The strategy, announced by the Norwegian government, includes a detailed plan to double onshore wind capacity by 2030, accelerate offshore wind development, and dramatically ...

Overall what is needed is holistic planning for positioning clean energy-industrial value chains and infrastructure, and bolder and reliable policy frameworks and stable support to enhance investment ...

Norway has competitive advantages in its abundant renewable energy resources and a well-functioning energy sector. Our energy policy is intended to encourage modernisation of the ...

# Norway s wind power supporting energy storage policy

The standstill was driven by the lack of public support for onshore wind power that caused a pause in licens-ing from 2019 until 2022 and a shift from incentives to taxation.
