Learn more about structural design requirements for solar installations in the City of Portland.

This comprehensive guide outlines the structural requirements for solar panels and provides an overview on the inner workings of the installation process.

Technological advances, new business opportunities, and legislative and regulatory mandates are all contributing factors that drive the need for up-to-date interconnection and interoperability standards that ensure cross ...

In this article, we'll look at consequential provisions of the engineering standard ASCE 7-22, Minimum Design Loads for Buildings and Other Structures, which is already adopted in Florida and will be ...

This guide covers wind load calculations for both rooftop-mounted PV systems and ground-mounted solar arrays, explaining the differences between ASCE 7-16 and ASCE 7-22, the applicable sections, and step-by ...

Technical Information Bulletin for Solar PV Systems (on all types of buildings) -- Provides consistent and comprehensive information regarding current state requirements for solar PV systems on all ...

Find out how the ASCE 7 standard affects wind load, seismic load, and tornado load considerations for solar photovoltaic (PV) systems.

It is intended to minimize permitting uncertainty and differing interpretation regarding specific code requirements for solar PV installations.

ASCE 7-16 For PV Systems Changes in ASCE 7-22 Code Development Issues Informational Resources The 2022 edition of ASCE 7 includes an update to Section 13.6.12 that says, "The solar panels shall not be considered as part of the load path that resists the interconnection force unless the panels have been evaluated or tested for such loading." This new subsection has the potential to eliminate from the marketplace some

Only three current carrying conductors are allowed in the raceway for the output of the inverter combiner ...

In this article, we'll dive deep into the ins and outs of building codes for solar panel installation, covering everything from structural integrity and electrical safety to fire prevention and the permitting process.

Multiple inverter outputs may be combined in a dedicated PV only combiner panel with no loads. Only three current carrying conductors are allowed in the raceway for the output of the inverter combiner panel.
