SEIA's latest report highlights that 77% of all solar capacity installed in 2025 (year-to-date) has been in states won by President Trump, including 8 of the top 10 states for new installs.

Solar PV accounts for almost 80% of the global increase, followed by wind, hydropower, bioenergy and geothermal. In more than 80% of countries worldwide, renewable power capacity is set to grow faster ...

o Utility-scale solar (including PV and CSP technologies) and C& I PV electricity production dropped by 46% from its summer peak (July 2024) to its winter low (December 2024), ...

Explore the future of solar in 2025--key trends, new tech, and policies driving global clean energy growth.

Despite these headwinds, the global solar PV market is still expected to grow by 10% in 2025, reaching 655 GW under the Medium Scenario (see Fig. 4). This would mark a continuation of ...

China remained the dominant market, installing between 309 GW and 357 GW and accounting for nearly 60% of all new installations. The European Union followed with 66 GW, led by Germany (17.2 ...

Nearly 50 GWdc are expected to come online in 2025, and almost 44 GWdc in 2026; then, annual installations will stabilize around 38-39 GWdc annually from 2027 to 2030. However, the ...

In the first six months of 2025, the world added 380 GW of new solar capacity -- 64% higher than during the same period in 2024, when 232 GW were installed. In 2024, it took until ...

The IEA-PVPS 2025 Snapshot of Global PV Markets reveals a pivotal moment for solar power: global PV capacity surpassed 2.2 TW, with more than 600 GW installed in 2024 alone.

The focus is on ground-mounted systems larger than 5M AC, including photovoltaic (PV) standalone and PV+battery hybrid projects (smaller projects are covered in Berkeley Lab's separate U.S. Distributed ...
