Why are solar module prices going up?

(USD 1.0 = EUR 0.851) Solar module prices are set to jump by 9% in the fourth quarter of 2025 and rise through 2026, driven by a convergence of three factors, including Chinese government policy changes, Wood Mackenzie said on Thursday.

What factors affect the cost of photovoltaic modules?

1. Cost Factors Driving Price Fluctuations The cost of photovoltaic modules is primarily composed of solar cells, glass, encapsulation film, and labor expenses.

Will price fluctuations affect the photovoltaic module market?

As the global energy transition accelerates, the photovoltaic (PV) industry, as a key component of renewable energy, continues to attract significant attention for its promising development prospects. However, price fluctuations in the photovoltaic module market remain a critical factor influencing the industry's growth.

Will photovoltaic module prices go down in 2025?

However, given the supply-demand pressures and the competitive landscape of the industry, photovoltaic module prices are expected to remain in a low adjustment phase in 2025. Smaller enterprises may intensify their inventory clearance efforts to survive, which could create temporary downward pressure on market prices.

Solar and storage developers face a sharp increase in equipment procurement costs from Q4 2025 onwards due to Chinese government policy changes and supply-side production cuts, ...

Wood Mackenzie's October 2025 analysis confirms that PV module prices are jumping approximately 9% in Q4 2025, with further increases expected through 2026. This isn't a temporary blip.

Energy data and analytics firm Wood Mackenzie believes that solar PV module prices will climb by about 9% in Q4 2025. The rise is driven by polysilicon consolidation, supply cuts, and the ...

The current round of photovoltaic module price adjustments has imposed significant operational pressure on industry players. Leading companies, with their high R&D costs, are at a ...

Photovoltaic panels are expected to increase in price

Solar module prices are set to jump by 9% in the fourth quarter of 2025 and rise through 2026, driven by a convergence of three factors, including Chinese government policy changes, Wood ...

"The reasons for the general price increase along the entire photovoltaic supply chain can be found, among other things, in increasing domestic demand in China," he said.

Anticipated Price Increase in Q4 2025: Wood Mackenzie projects a 9% increase in solar PV module prices in Q4 2025, with further rises expected in 2026 5. This is attributed to polysilicon ...

Wood Mackenzie says module prices will climb as China ends export rebates and consolidates polysilicon production.

Comprehensive guide to solar module prices in 2025. Current costs, market trends, buying strategies, and price forecasts. Updated with latest data.

With wafer and cell prices expected to follow, module prices will inevitably increase. Suppliers, especially those who suffered heavy losses in recent months, are looking to recoup their ...
