Renewables now account for 66% of Spain's installed power capacity. In 2024, solar PV recorded its best year ever: it generated 44,520 GWh, representing 17% of the country's total ...

OverviewTimeline of developmentsSolar thermal power plantsPhotovoltaicsPolicies, laws and incentivesResearch and developmentExternal linksSpain is one of the first countries to deploy large-scale solar photovoltaics, and is the world leader in concentrated solar power (CSP) production. Spain is also one of the European countries with the most hours of sunshine. In 2022, the cumulative total solar power installed was 19.5 GW, of which 17.2 GW were solar PV installations and 2.3 GW were concentrated solar power. In the same year, solar power accounted for 11....

In Spain, the progress has been even more dramatic. Photovoltaics reached an all-time high, accounting for 21% of electricity generation, nearly double the EU average. This marks a ...

At some times in spring, as much as 60 per cent of Spain's electricity comes from the sun. That has enabled Spain to slash its use of gas and coal-fired power stations. Consumers have ...

Spain is one of the first countries to deploy large-scale solar photovoltaics, and is the world leader in concentrated solar power (CSP) production. Spain is also one of the European countries with the ...

This surge highlights Spain's vital role in reshaping the continent's energy landscape. Photovoltaics, which convert sunlight directly into electricity using solar panels, accounted for an ...

Spain marked a clean energy milestone in July 2025, according to APPA Renewables' latest monthly report. Renewables generated 13,871 GWh, covering 55.1% of the national electricity mix. Solar PV ...

Renewable energy is currently experiencing substantial development in Spain. With the goal of reaching climate neutrality by 2050, the country is implementing measures to achieve a 100 ...

Power generated by solar panels in Spain

In 2024, Spain experienced a 0.5% decrease in electricity generation for the second consecutive year compared to the previous year, reaching a total of 262,247 GWh. This follows two consecutive years ...

Spain's solar PV capacity reached 6 GW in 2024, making it the country's top power source with a 25.1% share, surpassing wind at 24.9%. Renewable generation grew 10.3%, ...

Spain's National Integrated Energy and Climate Plan calls for autoconsumo (self-generated solar at residential, commercial and industrial sites) to reach 19 GW by 2030, up from an estimated 7 GW in ...
