A report that identifies renewable energy siting policies and permitting authorities across all 50 states, highlighting which government entity or entities in each state or territory have the ...

SEIA's state affairs team is actively engaged on several fronts to ensure pro-solar policies are implemented and protected at the state level. We work closely with official state affiliates and other ...

There are a wide variety of policies at the state and local level that impact distributed solar and its customers. By enacting federal and state-level policies to accelerate the growth of utility-scale solar, ...

These resources help government entities in the United States looking to procure solar or make it easier for their communities to install solar.

This report summarizes the latest statistics on solar power capacity by state and highlights the top U.S. states in solar power generation.

New report and interactive map provide a detailed look at the diversity of renewable energy siting and permitting regulations and processes across the United States, profiling all 50 ...

The Guide is a comprehensive EPA resource designed to help state officials draw insights from other states' implementation experiences and policy innovations to help meet their own state's ...

This page describes the patchwork of federal, state, and local policies and regulations pertaining to renewable energy systems that impact project development.

Local governments have many tools at their disposal to influence solar energy development. At the same time, decisions made at the federal and state levels set the context for ...

# Solar photovoltaic power generation in state agencies

State agencies are adding renewable energy generation on their sites and buildings, usually in the form of solar photovoltaics (PVs), to reduce electricity purchases from the grid.
