Spending on the generation of low-emissions power globally has nearly doubled in the past five years, with solar PV leading the way. Investment ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Solar energy Solar energy generation This interactive chart shows the amount of energy generated from solar power each year. Solar generation at scale - compared to hydropower, for example - is a ...

Globally, spending on low-emissions power generation has almost doubled over the past five years, led by solar PV. Investment in solar, both utility-scale and rooftop, is expected to reach ...

Strong demand for new energy supply and rising power prices strengthen the market fundamentals for new solar projects in the long term. Overall, our low case is 18% lower than our ...

The world invested US\$554 billion into solar PV projects in 2024, leading renewable electricity generation sources, according to IRENA.

According to the International Energy Agency (IEA), investment in solar energy is surging and expected to exceed \$500 billion this year, surpassing all other electricity sources. This milestone ...

Policymakers in some of the world's largest economies are reducing support for solar power generation. Even so, Goldman Sachs Research expects rapid growth in the sector, with global ...

Investors are betting big on renewable energy, which is projected to reach \$2.2 trillion this year--more than double the investment in fossil fuels. This accounts for more than 40% of the \$3.3...

Solar power generation investment is huge

Making cells also takes energy, but solar power is fast making that abundant, too. As for demand, it is both huge and elastic--if you make electricity cheaper, people will find uses for it.
