What happens if a solar panel is broken?

Common causes of solar panel damage are falling objects, thermal stress, and micro-cracks and scratches. A broken solar panel may continue to work, albeit at a reduced efficiency. Broken solar panels pose a serious fire and safety risk and must be removed and replaced. Some companies can fix broken solar panels, but this is costly.

What happens when a twig touches a solar panel?

Twigs, leaves and other debris, such as a twig, can be blown across the glass of solar panels. The damage to the panels in cases such as this starts almost microscopically with "micro-scratches". These micro-scratches on your solar panels accelerate the degradation timeline, leading to less solar energy being absorbed.

What causes solar panels to break?

Solar panels can be broken by weather conditions such as hail and debris from extreme winds. While damage from a tree limb falling from a storm might be surprising, smaller culprits like twigs, leaves, and dirt or sand are often the biggest causes of damage when they are blown across the glass of solar panels.
