The Ivanpah Solar Power Facility served as inspiration for the HELIOS One solar power plant's physical appearance in the 2010 videogame Fallout: New Vegas. The facility inspired American rock band The Fray to name their 2014 album Helios. The album art is an aerial photograph of the plant, which also features in the lyric video for Love Don't Die.

In this paper, we propose an approach that identifies PV panels by means of a deterministic algorithm that carefully and extensively analyses the colours of the pixels forming the ...

These approaches applied the object detection technique to reveal PV panels on aerial images, with CNN being fine-tuned to characterise the mask contours used for the arrays.

The strategy consists of flying an unmanned aerial vehicle (UAV) equipped with a dual camera (RGB and thermal) over the PV plant of interest, followed by the generation of ...

53 images labeled with 267 polygons were used to train a computer vision model to detect solar panels from above. It's a demonstration of collecting and annotating data from a drone video and using that ...

Infrared imaging from drones is increasingly used for creating thermal maps, in particular of solar panel installations, to perform temperature measurements, quickly detect anomalies in each ...

Ever wondered if those shiny photovoltaic panels on rooftops could turn your drone footage into a disco ball

nightmare? You're not alone.

Reports of solar panel installations have been supplemented with object detection models developed and used on openly available aerial imagery, a type of imagery collected by ...

Photographer Tom Hegen has captured a stunning series of aerial photos showing what sprawling solar power plants look like from a bird's-eye view. The project is titled The Solar Power ...

beautiful drone view of a solar panel array close to sunset. the reflection of the sun is bouncing off the panels. the colours are rich and vibrant - solar plant aerial stock pictures, royalty-free photos & images
