The discovery of the four Galilean satellites eventually led to the understanding that planets in our solar system orbit the Sun, instead of our solar system revolving around Earth.

Pluto was once our solar system's ninth planet, but has been reclassified as a dwarf planet. It's located in the Kuiper Belt.

The period varies from appearance to appearance because of the gravitational effects of the planets. Measured from one perihelion passage to the next, Halley's period has been as short as 74.42 years ...

In astrology, Mercury is the planet associated with communication, expression, and cognition. Travel, technology, and day-to-day affairs, too. What ...

The smallest and innermost planet of the solar system, Mercury is named after the Roman deity who served as a messenger to the gods. Within astrology, it symbolizes ...

Mercurial energy can be good or bad, but it will certainly be energizing! This planet also prompts us to move from one thing to the next and to get answers on both ...

It's about the same size as Mercury. In the past, some scientists thought of Callisto as a boring "ugly duckling moon" and a "hunk of rock and ice." That's because the crater-covered world didn't seem to ...

In astrology, Mercury symbolizes communication, intellect, and reasoning. Its influence significantly impacts how you express thoughts and interact with others. Here's how Mercury's ...

NASA's real-time science encyclopedia of deep space exploration. Our scientists and far-ranging robots explore the wild frontiers of our solar system.

What does mercury planet mean

For this reason, the first four planets - Mercury, Venus, Earth, and Mars - are terrestrial planets. They are all small with solid, rocky surfaces. Meanwhile, materials we are used to seeing as ice, liquid, or ...

Overview Nomenclature Physical characteristics Orbit, rotation, and longitude Observation Observation history External links Mercury is the first planet from the Sun and the smallest in the Solar System. It is a rocky planet with a trace atmosphere and a surface gravity slightly higher than that of Mars. The surface of Mercury is similar to Earth's Moon, being heavily cratered, with an expansive rupes system generated from thrust faults, and bright ray systems, formed by ejecta. Its largest crater, Caloris Planitia, has a diameter of 1,550 km (960 mi), which ...

Mercury is named after the Roman messenger god, a figure associated with travel and communication. In astrology, it holds similar themes; ...

Mercury, the innermost planet of the solar system and the eighth in size and mass. Its closeness to the Sun and its smallness make it the most elusive of the planets visible to the unaided ...

Mercury - the name alone conjures up images of the swift-footed Roman god, the silvery liquid metal, and the enigmatic planet closest to the sun. Yet, this ...

Mercury formed about 4.5 billion years ago when gravity pulled swirling gas and dust together to form this small planet nearest the Sun. Like its fellow terrestrial planets, Mercury has a ...
