Wood Mackenzie's October 2025 analysis confirms that PV module prices are jumping approximately 9% in Q4 2025, with further increases expected through 2026. This isn't a temporary blip. It ...

Somewhere in the tumult of the global economy in recent months, solar panel prices hit bottom and then began to rise. The oversupply that helped to push prices down last year has eased a...

Solar and storage prices are about to rise after a year and a half of record lows, according to new data from Wood Mackenzie.

Sources attribute the price momentum to rising upstream polysilicon and wafer costs, coupled with government signals on establishing a price floor, regulating production utilization, and ...

This decision introduces a new structural cost for all solar products exported from China, consolidating a shift in market dynamics after years of artificially low prices. Under this new scenario, ...

In recent months, solar panel prices have experienced a notable increase after reaching a low point. This shift is influenced by various factors, including international market dynamics and ...

For now, opportunistic price increases linked to new tariffs are being observed, while Chinese producers explore shifting cell production to Africa to bypass restrictions.

The analysis reveals that three converging factors - polysilicon consolidation, supply-side production cuts, and the cancellation of China's 13% VAT export rebate - will drive solar module ...
